[Algebraic curve - Wikipedia](#)

In algebraic geometry, a plane affine algebraic curve defined over a field k is the set of points of K^2 whose coordinates are zeros of some bivariate polynomial with coefficients in k , where K is some algebraically closed extension of k .

[Chapter 2 A ne Algebraic Geometry - Huntsville, TX](#)

Chapter 2 A ne Algebraic Geometry 2.1 The Algebraic-Geometric Dictionary The correspondence between algebra and geometry is closest in a ne algebraic geometry, where the basic objects are solutions to systems of polynomial equations. For many applications, it suffices to work over the real \mathbb{R} , or the complex numbers \mathbb{C} .

[Affine algebraic geometry: Algebraic Incarnation of Points](#)

This is the first in a series of videos introducing affine algebraic geometry. One of the principles of algebraic geometry is that the co-ordinate ring captures all the geometry.

[Affine space - Wikipedia](#)

Affine algebraic geometry. In algebraic geometry, an affine variety (or, more generally, an affine algebraic set) is defined as the subset of an affine space that is the set of the common zeros of a set of so-called polynomial functions over the affine space.

is called the affine algebraic variety V determined by J . Note that $V(J)$ may be empty. This happens, for example, if $V(J) = (1) = \mathbb{A}^n(\mathbb{C}) = \mathbb{A}^n(k)[x_1, x_2, \dots, x_n]$ contains the equation $1 = 0$.

[Algebraic Geometry Course Notes - AG -- J.S. Milne](#)

pdf file for the current version (6.02) This is a basic first course in algebraic geometry. In contrast to most such accounts it studies abstract algebraic varieties, and not just subvarieties of affine and projective space.

[Introductory Geometry: Algebraic Geometry](#)

Affine Spaces and Algebraic Sets In the following, we will do everything over the field \mathbb{C} of complex numbers. The reason for this choice is that \mathbb{C} is algebraically closed, i.e., it satisfies the

algebraic geometry - Is the affine curve

$y^2=x^4+y^4$ in ...

Is the affine curve $Sy^2-x^4+y^4$ in $S\mathbb{A}^2$ singular or nonsingular? Find the singularities and show the types of the singularities if the curve is singular. Let $Sf(x,y)=x^4+y^4-y^2$, $Sf(x,y)=0$ at $S(0,0)$, $(0,1)$, $(0,-1)$, $S\frac{(\cdot)}{(\Delta)}(x,y)=4x^3=0$ at $S(0,y)$.

Affine algebraic geometry: Zariski Topology

This is the second video introducing affine algebraic geometry. It talks about the Zariski topology on affine varieties. This is the most elementary and fundamental topology used in algebraic

Affine Space in Algebraic Geometry ; math - reddit

In basic algebraic geometry, we are concerned with affine space \rightarrow that is, we have K^n equipped with the Zariski topology for some algebraically-closed field K . In doing so, we "throw out" or disregard the natural vector space structure of K^n .

Algebraische Geometrie Wikipedia

Die algebraische Geometrie ist ein Teilgebiet der Mathematik, das die abstrakte Algebra, insbesondere das Studium von kommutativen Ringen, mit der Geometrie verknüpft. Sie lässt sich kurz als das Studium der Nullstellengebilde algebraischer Gleichungen beschreiben.
