[Turing degree - Wikipedia](#)

Two sets are Turing equivalent if they have the same level of unsolvability; each Turing degree is a collection of Turing equivalent sets, so that two sets are in different Turing degrees exactly when they are not Turing equivalent.

In this case the degree of undecidability of the function is also called its degree of non-computability; it is also called its Turing degree or  $\alpha$ -degree. The set of all degrees of undecidability turns out to be, for both approaches, an upper semi-lattice  $\mathcal{D}$ , and the resulting semi-lattices of the degrees of undecidability of sets and functions are isomorphic.
