Listeria - an overview | ScienceDirect Topics

Listeria monocytogenes is the primary species that is pathogenic for humans. Listeriosis is most commonly due to ingestion of contaminated foods, primarily dairy products, meats, and fresh produce. Immunocompromised individuals, including the elderly and pregnant females, are at highest risk for infection. Infection during pregnancy can lead to life-threatening fetal or neonatal infection.

Listeria - Wikipedia

Listeria is a genus of bacteria that, until 1992, contained 10 known species, each containing two subspecies. As of 2014, another five species were identified. Named after the British pioneer of sterile surgery Joseph Lister, the genus received its current name in 1940.
