[Mass transport and interaction rates - Biacore Life Sciences](#)

Mass transport and interaction rates Mass transport Because interaction occurs at the surface of the sensor chip, analyte must be transported laterally in the flow cell from the bulk solution to the surface before interaction with ligand can take place.

What Is Mass Transfer? - COMSOL Multiphysics Mass transfer describes the transport of mass from one point to another and is one of the main pillars in the subject of Transport Phenomena. Mass transfer may take place in a single phase or over phase boundaries in multiphase systems. In the vast majority of engineering problems, mass transfer

Mass Transport Systems | a2-level-level-revision, biology ...

The Mass Transport System is like transport on trains where people travel together on the same train, in the same direction, at the same speed, but may get off at different places. In a mass transport system, all the substances move in the same direction at the same speed.

Interlude: Interphase Mass Transfer

Interlude: Interphase Mass Transfer The transport of mass within a single phase depends directly on the concentration gradient of the transporting species in that phase.

Mass adding of transports - Community Archive

Hi, I am doing a "mass migration" of transports from one system to another and was wondering is there a faster way of adding transports in STMS.

Basic Equations of the Mass Transport through a Membrane ...

Publisher Summary. Mass transport in the presence of convective mass flow is significant in order to predict the reaction process. On the other hand, the use of convective flow is rather rare because the aim is mostly to minimize the outlet rate of the reactant on the permeate side.
