Protein design - Wikipedia

Protein design is the rational design of new protein molecules to design novel activity, behavior, or purpose, and to advance basic understanding of protein function. Proteins can be designed from scratch (*de novo* design) or by making calculated variants of a known protein structure and its sequence (termed protein redesign).

Methods for Protein Purification in Biotechnology

The degree of protein purity required depends on the intended end use of the protein. For some applications, a crude extract is sufficient. However, for other uses, such as in foods and pharmaceuticals, a high level of purity is required. To achieve this several protein purification methods are
