A linear equation is always a polynomial of degree 1 (for example x+2y+3=0). In the two dimensional case, they always form lines; in other dimensions, they might also form planes, points, or hyperplanes.

Difference equations are used in a variety of contexts, such as in economics to model the evolution through time of variables such as gross domestic product, the inflation rate, the exchange rate, etc. They are used in modeling such time series because values of these variables are only measured at discrete intervals.

What Is the Difference between Linear and Nonlinear

While a linear equation has one basic form, nonlinear equations can take many different forms. The easiest way to determine whether an equation is nonlinear is to focus on the term nonlinear itself. Literally, it s not linear. If the equation doesn t meet the criteria above for a linear equation, it s

nonlinear.

Rational difference equation Wikipedia

A first-order rational difference equation is a nonlinear difference equation of the form $w_{t+1} = \frac{aw_t + b}{cw_t + d}$. {\displaystyle w_{t+1}={\frac {aw_{t}+b}{cw_{t}+d}}.} When a, b, c, d {\displaystyle a,b,c,d} and the initial condition w_0 {\displaystyle w_{0}} are real numbers, this difference equation is called a Riccati difference equation .
