[Piecewise linear manifold - Wikipedia](#)

In mathematics, a piecewise linear manifold is a topological manifold together with a piecewise linear structure on it. Such a structure can be defined by means of an atlas, such that one can pass from chart to chart in it by piecewise linear functions. This is slightly stronger than the topological notion of a triangulation. An isomorphism of PL manifolds is called a PL homeomorphism.

There exist topological manifolds that are homeomorphic to a simplicial complex but do not admit a PL structure (non-combinatorial triangulations), see Example 21.4. [www.math.purdue.edu](#)

The branch of topology dealing with polyhedra. By a polyhedron one means, first and foremost, a subset of a topological vector space which is a finite or locally finite union of convex polytopes of bounded dimension, but also topological polyhedra with a fixed piecewise-linear structure (see below).

Among the most studied triangulations are piecewise linear triangulations of high-dimensional topological manifolds. Their study culminated in the late 1960s–early 1970s in a complete classification in the work of Kirby and Siebenmann. It is this classification that we discuss in this book, including the celebrated Hauptvermutung and Triangulation Conjecture.
