Catalytic Effect during Friction - Springer
Widely known selforganization processes during friction such as the lubricating effect of electric cur rent [11], abnormally low friction [16], or the Bogachev Mints effect [17] result in a drastic drop of the wear rate. In this connection, control of spontane ous or nonspontaneous processes makes it possible to control the wear during friction.
Self-organization and entropy reduction in a living cell Long amino acid chains form proteins, which are the most abundant macromolecules in the living cells, present in their membranes, cytosol, cell organelles, and chromosomes. They constitute about 50% of the dry mass of a living cell. Each type of protein has its own unique structure and function.

SELF-ORGANIZATION AND FRICTION DURING SLIDING - ePrints@IISc

During lubricated conditions, the friction decreased for unidirectional and 8-ground surfaces and increased for random surfaces with the number of cycles. Furthermore, the friction and transfer layer formation depend on the surface textures under both dry and lubricated conditions during the first few sliding cycles.
