Synaptic Constituents in Health and Disease | ScienceDirect

The number of synaptic vesicles is reduced to almost nil in the exhausted state and on the effect of normal blood supply, new vesicles are seen in the terminals. The number of these supposedly newly formed vesicles is rather high and their distribution inside the presynaptic endings is uneven. They are situated mainly in groups in the center, sticking together. The results stress the importance of choline not only as a transmitter precursor but also as an important membrane constituent, too.
